

Blending Modes change the way the layer blends with the one below. Experiment and have fun !

The "eyes" toggle the visibility of the layers off & on - just click them.

An adjustment layer. In this example it is a Levels layer.

An additional image layer. In this example a boat has been added to the beach scene on the background below.

The active layer i.e. the one currently being worked on is highlighted in blue. When in Quick Mask mode this turns grey.

Click and use the slider to increase and decrease the layer opacity

This layer is carrying an additional image

This layer and the one below have layer masks that have been painted on to remove parts of the layer

Layers can be renamed by double clicking on the name and typing the new one. The background can be converted to a layer by renaming it to something like "Layer 0".

These symbols are shortcuts to the more often used actions found in the "Layer" menu.
